

Air pollution, water pollution, light pollution, noise pollution, environmental degradation, heavy truck and rail traffic, lower quality of life, health and safety concerns, and depressed residential property values in historic downtown St.Marys; this could be the legacy we leave to future generations.

Online, World Wide and Knights of the Green Shield have discussed natural gas liquefaction facilities, biomass, and wood pellet manufacturing facilities for The Port of St. Marys. Do a search and click on the images.

Google search inter-modal rail and truck facilities and barge port facilities; click on the images. Is this what we really want in the historic downtown area of St. Marys?
