

I oppose any industrial development of the 720 acres of contaminated land, river, and wetland until there has been an evaluation at the State and Federal level. Remediation of polluted paper mill sites have been successfully redeveloped in a number of states. I believe it will be our legacy and our pledge to the environmentalists world wide that this site is cleaned up! Therefore I'm forwarding all the questions and comments I emailed to Mr. Williams, Program manager for the Ga. Dept. of Natural Resources.
