AID TO CONSTRUCTION FEE

Revised June 17, 2014

Section 98-57 City Ordinance for Construction Fee

- (a) In order to connect to the City of St. Marys water and/or wastewater utility system, all residential, commercial, institutional, industrial or any other structure requiring water and/or wastewater utility services, shall pay an aid-to-construction fee in addition to any fees required by ordinance prior to connecting to the city water and/or wastewater system.
- (b) The aid-to-construction fee will be based upon improvements needed for the water or wastewater infrastructure and construction or expansion of the water or wastewater treatment facilities serving the city. The city currently has two wastewater treatment facilities. The current wastewater treatment plants are known as the Point Peter Plant and the Scrubby Bluff Plant. Each aid-to-construction fee will be based on the expansion or construction needed for any and all improvements or expansions of the water and wastewater plants serving the city. **These fees will only be used for the improvement or expansion of the water and wastewater treatment facilities located within the city.**
- (c) The aid-to-construction fee for commercial subdivisions and/or structures, and residential subdivisions and/or structures shall be calculated based on the estimated average daily water consumption of each type of structure or unit as outlined in Table 98-57.1, multiplied by the estimated construction cost per gallon, as listed in the fee ordinance, then multiplied by the number of units. **The estimated aid-to-construction cost per gallon shall increase May 1 of each succeeding year, beginning in May 2010, at a rate of five percent.** If the proposed use is not included in Table 98-57.1, then the daily average water consumption rate shall be determined by the City Manager and/or their designee.

Owner/Developer of any structure shall have the option of providing an Earthcraft or LEED (Leadership in Energy and Environmental Design) certified facility that may modify the daily average water consumption rate as listed in Table 98-57.1. The aid-to-construction fee shall be the lower of the figures derived from using either figures from 98-57.1 or the LEED or Earthcraft certified figures. The City will only accept certified LEED or Earthcraft figures from a current Georgia registered professional engineer or current Georgia registered architect.

For example: for a 2011 development with 50 units of one bedroom apartments the fee would be GPD (Table 98-57.1) X Cost Per Gallon X Unit Total = Aid-To-Construction Fee or $150 \times \$12.58 \times 50 = \$94,350.00$ would be the aid-to-construction fee.

- (d) Aid-to-construction fees for commercial or residential projects that do not require subdivision review and approval shall be paid with submittal of a request for a building permit. Aid-to-construction fees for commercial or residential subdivisions shall be paid prior to the receipt of a building permit for any structure.

- (e) Additions and renovations made to existing structures shall pay an aid-to-construction fee based on the number of fixtures to be added. The fee shall be calculated based on 10 units per fixture and then multiplied by the current estimated construction cost per gallon.

Earthcraft and LEED certification may also be used for existing structures. The relocation of one or more fixtures within the same existing building envelope will not require an aid-to-construction fee.
